

Engine Relocation

The cost effective alternative to a new engine

As an operator, engine relocation may well represent the most cost effective solution to your power generation requirements, whether by transferring engines within your existing business or by sourcing used equipment on the world market.

The most critical factor in this situation is the way that the engine relocation is managed. The risk of engine failure and consequent financial loss from a badly managed transfer is high and the only way to be completely sure that your engine will work effectively in its new location is to deal with the original equipment manufacturer.

MAN Diesel & Turbo's inherent experience and understanding of diesel engines and their capabilities is unmatched. We are the only company with access to the full original specifications and with detailed knowledge of the engineering requirements which must be fulfilled in order to achieve a successful reinstatement.

Our field service engineers are highly experienced in recommissioning engines and will ensure that every aspect of their performance is fully tested and optimised before handover. This includes auxiliary equipment and liaising with other suppliers where necessary to ensure that every part of the installation functions correctly.

We provide a full project management service supported by expert personnel, with global back-up services including 24/7 telephone support. With MAN Diesel & Turbo's Engine Relocation, you can have complete confidence that your engines will run efficiently in their new locations from day one and continue to provide excellent long term service.

Engine Relocation

The cost effective alternative to a new engine

Key benefits:

- Expert project management, service and advice throughout transfer
- Complete engineering solutions
- Engines and auxiliary equipment covered
- Disassembly, removal, packing & transportation to new location
- Civil engineering work
- Efficient, economical performance in new location
- Risk of failure of relocated engines eliminated
- Lifetime costs reduced with reduced risk of breakdowns and stoppages
- Peace of mind with full warranty
